ASTERIA-3 MISSION DATASHEET (SYNTHETIC TEST EVIDENCE)

This document is fabricated solely for OrbitScore demonstration and software testing. It is not a real spacecr

1. Mission: Asteria-3 6U technology demonstration
2. Orbit: 510 km nominal altitude; 97.4 deg inclination; near-circular
3. Propulsion: green monopropellant demonstration unit
4. Post-mission disposal: estimated 8.4 years remaining orbital lifetime (illustrative)
5. Disposal reliability: 0.94 (illustrative design estimate)
6. PMD probability: 0.985 (illustrative)
7. Passivation: planned; stored energy and pressure sources addressed in synthetic §10.1
8. Tracking/identification/maneuverability: declared yes for illustrative test purposes
9. Reentry casualty expectation: 0.00008 (illustrative estimate)
10. Data are not verified engineering evidence and must not be used for flight decisions.
